

Project Description

The useful life of the existing bridge, which spans the thoroughfare channel between Mid Lake and Lake Tomahawk on the Minocqua Chain of Lakes, had expired. The Becher Hoppe team collaborated with the Town of Minocqua to design a new bridge that blends with the natural aesthetics of the northwoods charm.

Project Features

- Concrete structure with form liner treatment
- Height adjustment to accommodate taller boats to pass between the lanes
- Timber railings

Firm's Involvement

- Analyze different types of construction materials
- Prepare preliminary and final design
- Determine right-of-way requirements
- Storm water analysis
- Conduct public information meetings
- Prepare layout of concrete panel walls
- Prepare design study report
- Prepare environmental documentation
